Ekpoma, Edo State, Nigeria | LinkedIn | GitHub | Portfolio

PROFILE

Full-stack developer with ~2 years building and shipping web and mobile applications. One of few junior developers who independently delivers across both platforms — React for web, React Native for mobile, Node.js on the back end. Experienced across the full lifecycle: API design, testing, debugging, and documentation. Actively seeking remote roles where I can contribute from day one.

TECHNICAL SKILLS

Front-End: HTML5, CSS3, JavaScript (ES6+), TypeScript, React, React Native, Expo, Tailwind CSS, Bootstrap, Responsive Design
Back-End: Node.js/Express.js, PHP, Java/Spring Boot, Python (Django, Flask, FastAPI), Bull, Redis
Infrastructure & Databases: MySQL, PostgreSQL, MongoDB, Docker, Redis, Ubuntu/Linux, XAMPP
Tools: Git, GitHub, VS Code, Android Studio, Selenium, UI/UX Principles, SEO Best Practices

EXPERIENCE

SportsID Inc.

Jul 2025 – Mar 2026 · Remote

Web & Mobile Development Intern

- Contributed to early-stage feature development for a sports platform in a collaborative startup environment.
- Documented system workflows, UI structure, and feature requirements to support team alignment during development cycles.
- Tested UI across web pages, identifying and documenting layout and usability issues for the development team.
- Logged and tracked bugs during development iterations, supporting the team's quality assurance process.
- Participated in MVP demo sessions, contributing feedback that informed feature iterations and product decisions.

PROJECTS

Student Notification System

Sep 2025 – Feb 2026

Node.js · Bull · Redis · JWT · Role-Based Auth

- Built a Node.js push notification backend using JWT-secured REST APIs to deliver real-time academic alerts to students and staff with low latency.
- Implemented asynchronous notification processing using Bull and Redis to prevent API blocking during high request loads — tested across 20+ simulated user accounts.
- Designed a modular API that decouples notification logic from auth; demoed to 10+ students and received feedback used to improve alert delivery flow.

Smart Attendance Ecosystem

Jan 2026 – Mar 2026

React Native · React · TypeScript · Node.js · MongoDB

- Built a React Native mobile app (student-facing) and a React web dashboard (admin-facing) that share a single Node.js/MongoDB backend.
- Designed MongoDB schemas optimized for fast read/write operations in real-time attendance updates — records reflect instantly on the admin dashboard.
- Built geo-location and device-lock features to ensure students can only mark attendance within approved areas and from a single device at a time.

Libroflow — Library Management System

Feb 2026 – Apr 2026

HTML · CSS · Node.js · MySQL

- Built a full inventory and circulation system — admins can add, issue, return, and track books with full transaction history.
- Designed a relational database schema with tables for books, users, and transactions; implemented secure admin login with session management.

EDUCATION

Ambrose Alli University

Jun 2022 – Present

B.Sc. Computer Science · Ekpoma, Edo State

Advanced Data Structures & Algorithms · Database Systems Management · Introduction to Cybersecurity · OOP with Java · Applied Software Engineering · Server-Side Programming (Python & Java)

CERTIFICATION

Full-Stack Web Development Training

Aisotech Computer — MERN Stack, REST API Design, MVC Architecture, Git Workflows
