Ekpoma, Edo State, Nigeria | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFILE

Full-stack developer building and shipping web and mobile applications, with a strong foundation in backend systems, REST APIs, Java, TypeScript, and React. Experienced across the product lifecycle from API design and implementation through testing, debugging, documentation, and iterative improvement. Comfortable working independently and collaboratively in remote teams.

TECHNICAL SKILLS

Front-End: TypeScript, JavaScript (ES6+), React, React Native, Expo, Tailwind CSS, Bootstrap, HTML5, CSS3, Responsive Design

Back-End: Java, Node.js/Express.js, REST APIs, Bull, Redis

Infrastructure & Databases: MySQL, PostgreSQL, MongoDB, Docker, Redis, Ubuntu/Linux, XAMPP

Tools: Git, GitHub, VS Code, Android Studio, UI/UX Principles

EXPERIENCE

SportsID Inc.

Jul 2025 – Mar 2026 · Remote

Web & Mobile Development Intern

- Contributed to early-stage frontend feature development and third-party integrations for a sports platform within a collaborative startup team.
- Documented system workflows, UI structure, and feature requirements to support development planning and team coordination.
- Performed UI and functional testing across web pages, identifying layout, usability, and integration issues during development cycles.
- Reported bugs and inconsistencies during iterative development and demo sessions, working cross-functionally with the team.

PROJECTS

Student Notification System

Sep 2025 – Feb 2026

Node.js · REST APIs · JWT Auth · Bull · Redis | [GitHub](#)

- Built a Node.js backend exposing JWT-secured REST APIs to deliver real-time academic alerts to students and staff with low latency.
- Implemented asynchronous, scalable notification processing using Bull and Redis queues to prevent API blocking under high request loads — tested across 20+ simulated user accounts.
- Designed a modular, decoupled API architecture separating notification logic from authentication; demoed to 10+ students and used feedback to improve delivery flow and reliability.

Smart Attendance Ecosystem

Jan 2026 – Mar 2026

React Native · React · TypeScript · Node.js · MongoDB | [GitHub](#)

- Built a React Native mobile app (student-facing) and a React/TypeScript web dashboard (admin-facing) sharing a single Node.js/MongoDB backend and REST API layer.
- Designed MongoDB schemas and backend endpoints optimized for fast real-time read/write operations — attendance records reflect instantly on the admin dashboard.
- Built geo-location and device-lock features integrated with the backend to ensure students can only mark attendance within approved areas and from a single device at a time.

Libroflow — Library Management System

Feb 2026 – Apr 2026

Node.js · MongoDB · HTML · CSS | [GitHub](#)

- Built a responsive library management application with a user-facing catalog search and an admin panel backed by a Node.js/MongoDB REST API for managing books, members, transactions, and financials.
- Designed a secure, token-based authentication system supporting both user and admin roles with role-specific dashboards and permissions.
- Implemented the complete borrowing workflow in the backend, including availability checks, fines tracking, transaction history, and automated overdue calculations.

EDUCATION

Ambrose Alli University

Jun 2022 – Present

B.Sc. Computer Science · Ekpoma, Edo State

Advanced Data Structures & Algorithms · Database Systems Management · Introduction to Cybersecurity · OOP with Java · Applied Software Engineering · Server-Side Programming (Python & Java)

CERTIFICATION

Full-Stack Web Development Training

Aisotech Computer — MERN Stack, REST API Design, MVC Architecture, Git Workflows
